THE BURPEE Sweet Corn

Rich and Sweet

306

*Larger and Earlier
than the Famous Burpee
Golden Bantam*

A big, attractive ear, 7 inches long and $1\frac{3}{4}$ inches thick—a good size for eating from the cob. Full of toothsome sweetness and nourishment, with the same buttery flavor that has given world-fame to Burpee's Golden Bantam. And to think that "The Burpee" matures ten days ahead of Golden Bantam!

As an extra-early variety it will appeal to home gardeners, as they are always eager to have Corn from their own garden as early as possible. Of course, market growers will benefit considerably from the higher prices paid for the first Corn on the market.

Superb Quality

If it were for earliness alone, "The Burpee" would not occupy the prominent place we have given it in BURPEE'S ANNUAL. Perhaps its choice quality is of even more value to gardeners than its earliness.

Just think of "The Burpee" steaming hot with a liberal serving of good fresh butter ready for you to sink your teeth into the delicious creamy yellow kernels, and to enjoy the luxury Mother Nature has prepared for us in such generous portions.

We believe that in "The Burpee" Sweet Corn the exceptional qualities which made Burpee's Golden Bantam so enormously successful for home, market, and farm have been developed to a still higher degree.

You will be proud to see "The Burpee" in your garden or on your farm, with its strong upright plants, from 5 to $5\frac{1}{2}$ feet tall, covered with healthy rich green foliage and an abundant crop of well-protected ears.

To Our Friends, Our Customers:

For more than fifty years we have been improving vegetables and flowers, and creating new varieties more useful or more beautiful.

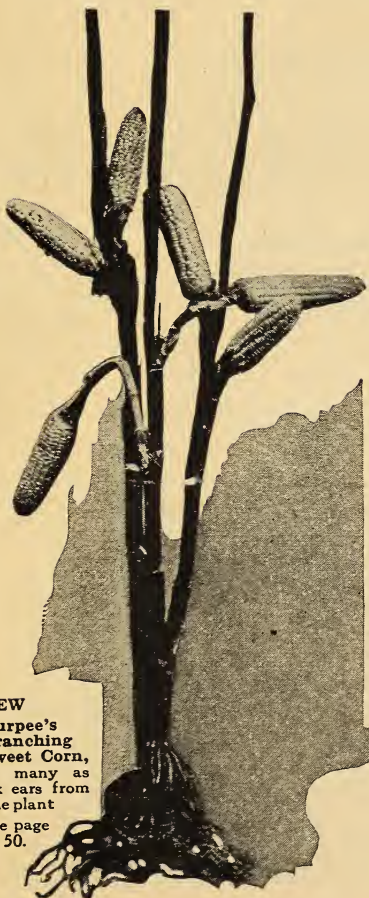

Nearly every garden in America contains some Burpee varieties. No garden is complete without them. Burpee's Golden Bantam Sweet Corn, Bush Lima Beans, Giant Zinnias, and Sweet Peas are just a few of the Burpee specialties famous everywhere.

Last year we introduced another golden Sweet Corn—so good we have named it "Burpee." See opposite page. And on page 50 we now first offer Burpee's Branching Sweet Corn, with as many as six ears on a single plant. On the back cover we picture the new Sweet Peas for 1928, including Fluffy Ruffles—the first Ruffled Sweet Pea. Our new Giant Gold Medal Dahlias are offered on page 150.

The fact that we are growers and do the largest mail order seed business in the world enables us to sell the *best seeds that grow* at very moderate prices.

It is our business to serve you, and it is our pleasure to serve you well.

We wish everybody could see our fields of Dahlias—a Fordhook specialty that has grown to be one of the greatest attractions.

To the right is an intimate view of the formal gardens on FORDHOOK FARMS. You can create just as lovely effects at comparatively little cost.

Above are shown the old farm office and a few of the cold-frames filled with young sturdy Tomato plants for seed production.

Below is a section of the Fordhook Trial Grounds, where thousands of samples are tested every year.

Burpee's Sunnybrook Farm Swedesboro, N. J.

SUNNYBROOK FARM is located right in the midst of New Jersey's most famous trucking section. Its rich sandy soil produces particularly good seeds of all the various vine crops, such as Muskmelons, Watermelons, Squashes, Cucumbers, Pumpkins, also early Tomatoes, Peppers, and Egg Plants.

Many of our foremost strains of Flower Seeds also are grown on SUNNYBROOK.

To the left is a SUNNYBROOK scene showing the hand-cutting of Cucumbers. Every possible care is taken so that only typical, true-to-name plants are selected for stock-seed production. This is the reason for the excellent quality of Burpee's Seeds. The very best is saved for seed production, and, no matter how good a strain, our method of selecting it every year insures a continual improvement.

BURPEE'S CABBAGE

Cabbage succeeds best in cool moist climates, and in rather heavy friable loams with gravelly subsoil. Early cabbage is sown in the hotbed or in the house about the middle of February. Late cabbage for winter use is sown during June. One ounce will produce about 2000 plants. If seeded outdoors, sow one ounce to 300 feet of drill. Two ounces sown in the hotbed will give sufficient plants to set out an acre; sow 6 ounces in the open seed-bed for planting out one acre.

The seed offered has been grown on Long Island from selected plants. Pkt. 15¢; oz. 40¢; 4 ozs. \$1.15; ½ lb. \$1.90; lb. \$3.50; 2 lbs. \$6.50; 5 lbs. \$15.75, postpaid.

176 Enkhuizen Glory ☉

The round heads are very solid, of medium size (weighing from 6 to 8 pounds trimmed), and of fine flavor. They keep well when put away, and consequently Enkhuizen Glory is valuable also for sowing later in the season for early winter use. Plants set out in midsummer will produce fine large heads of just the right size for winter storing. Remarkably uniform heads. Broccoli—Winter Cauliflower

Broccoli has within late years become a favorite vegetable, perhaps due to the fact that new varieties of different characters have greatly widened its range of appeal. St. Valentine resembles an ordinary Cauliflower quite closely, but Curtis' Nine Star Perennial and Early Sprouting Annual varieties are very distinct in appearance and usefulness. Broccoli does best in rich soil and cool weather.

Requires a long season and cool weather to grow well. Pkt. 15¢; ¼ oz. 25¢; ½ oz. 45¢; oz. 75¢; 4 ozs. \$2.25; ½ lb. \$4.10; lb. \$7.50, postpaid.

156 Curtis' Nine Star Perennial

This is quite a departure from the ordinary Broccoli. The plant is perennial under average conditions. It will produce from 5 to 15 marketable heads on a single plant and will continue to do this year after year. The plants will withstand quite a bit of frost. Sow the seed in April or May and plant out during June, July, or August, setting the plants 4 feet apart on well-manured land. By the following March a permanent bed of Broccoli, which will produce 5 to 15 heads on each plant, will be ready for harvest. The heads have a fine close curd and they measure 6 to 10 inches in diameter. This has a most agreeable Cauliflower-like flavor. Pkt. 50¢; ¼ oz. \$2.45; ½ oz. \$4.20; oz. \$7.50; 4 ozs. \$22.50; ½ lb. \$41.85; lb. \$79.05, postpaid.

Burpee's Cauliflower

For an early crop start the seed indoors and set in the open about the end of April. For a main or fall crop, seed should be sown from June 1 to July 1 and the young plants set out during the latter part of July. In this locality (Philadelphia) the early dwarf varieties, such as Snowball, give best results also for the fall crop. Farther south the large late varieties are quite satisfactory for late or winter heading. One ounce will give from 1000 to 1500 good strong plants.

BURPEE'S CELERY

For the earliest crop sow in a hotbed during February or March. For the fall or main crop, seed may be sown in the open ground as early in the spring as the soil can be worked into good condition, and the plants should be set in the rows in July.

Celery requires a rich, well-manured soil and plenty of moisture so that it can make a continuous growth. One ounce is sufficient for 600 feet of drill. One ounce sown in the seed-flat gives 8,000 to 10,000 good strong plants; 2 ounces are needed for planting one acre.

Burpee's Golden Self-Blanching

262 Burpee's Golden Self-Blanching Celery ☉

Selected French-Grown Seed, Original Dwarf Strain

Although the seed grown in America the first year from the French stock, as offered below, gives general satisfaction in the home garden, yet most of the extensive growers insist upon having the French-grown seed, even though it costs nearly double the price.

The plants make a uniform, dwarf, and compact growth, with quite thick waxy yellow stalks of superior flavor. Crisp and nutty. Pkt. 25¢; ½ oz. 70¢; oz. \$1.20; 4 ozs. \$3.60; ½ lb. \$6.60; lb. \$12.00, postpaid.

Muskmelons—Cantaloupes

The most suitable soil for melons is a warm, sandy loam, well worked and enriched with old compost. Sow the seed in slightly raised hills, 4 to 6 feet apart each way. Eight to ten seeds are placed in each hill in a circle and are covered with an inch of fine soil. Melons thrive best on well-rotted compost, and a shovelful of old manure should be placed about ½ foot deep under each hill and firmly tramped down. The seed should be planted after the soil has warmed up and the weather is quite settled—about the middle of May. One ounce of seed for 40 to 50 hills; 2 to 5 pounds per acre.

Rich, rather sandy soils produce the finest crops of Watermelons, but a well-drained loam, especially with a southern exposure, is also suitable. Two shovelfuls of well-decomposed manure should be mixed with the soil of each hill. Watermelons should not be planted until the weather is quite warm. The plants grow vigorously and for this reason the hills should be about 6 to 8 feet apart. Place 6 to 8 seeds edgewise, with the eyes downward, in a circle in each hill, and cover $\frac{1}{2}$ inch deep with fine soil. One ounce will plant 20 to 25 hills; 4 to 5 pounds per acre.

Burpee's Tomatoes

Tomatoes are among the most useful and most easily grown vegetables in the home garden. They thrive in widely different soils and climates; are not apt to be injured by insects or plant diseases; take up little room (when tied to stakes or grown against a sunny wall of the house); and yield enormously for the space occupied. They are exceedingly wholesome, rich in vitamins, and available as an appetizing dish in a great variety of forms.

What is more attractive on a hot day—either as salad or a garnishing—than fresh, ripe, red tomatoes? They may be cooked in innumerable different ways—by themselves or combined with other vegetables and meats. They are excellent when put up for winter use. The green fruit picked at the end of the season can be utilized for delicious pickles or preserves. When care is taken in selecting the right varieties, luscious fresh tomatoes, fully ripened on the vine, may be enjoyed from midsummer until frost.

For many years BURPEE has specialized in Tomatoes. Each year many acres of our great Pennsylvania and New Jersey farms are devoted exclusively to growing Tomatoes.

The entire crop of Sunnybrook Earliana can be gathered generally in about three weeks from the time the first fruit ripens. This is very important, particularly for market growers, who thereby reach the market at a time when Tomato prices are still quite high. Fleshly, juicy, and of excellent flavor. 395 Fordhook Pickling

This has become a standard pickling variety with many who grow pickles both for home use and for market. The fruits are excellent for pickling while small but can be left on the vine to produce pickles of larger size, and may even be used for slicing. The flesh is pure white, crisp, and very juicy. It is thick and surrounds a very small seed cavity. The skin is an attractive deep rich green. It is unusually thin and remains tender after pickling. Fordhook Pickling is a strong and vigorous grower, producing a wonderful crop of fruits. The illustration to the left gives a good idea of their graceful, even shape, attractive size, and rich coloring.

Pkt. 10¢; oz. 25¢; 4 ozs. 55¢; ½ lb. 85¢; lb. \$1.45; 2 lbs. \$2.65; 5 lbs. \$6.40; 10 lbs. \$11.60.

"Sweet as an Apple"

833 Burpee's Sunnybrook Pepper

This variety was introduced by Burpee not so long ago, yet Burpee's Sunnybrook has quickly become the leading Pepper in certain sections of the country. It is an outstanding variety, positively the sweetest and most prolific of all Pimento Peppers. The illustration shows the natural size fruit. The bright scarlet fruits have very smooth, glossy skin. The flesh is unusually thick. Sweeter, perhaps, than any other Pepper known.

Burpee's Sunnybrook is enormously productive. The plants are of compact growth, about 15 inches tall, and make a spread of about 22 inches. The whole plant is simply laden with clusters of handsome and showy fruits.

Pkt. 25¢; ½ oz. 45¢; oz. 75¢; 4 ozs. \$2.25; ½ lb. \$4.10; lb. \$7.50; 2 lbs. \$13.95; 5 lbs. \$33.75.

Burpee's Cucumbers

Cucumbers should be grown in every garden, to furnish both large fruits for slicing for the table and small young fruits for pickling. In most sections it will be best to make two sowings: one as early in the spring as the weather permits, to supply fruits for the table during the summer months, and a second about the last of June or first of July, to furnish fruits for fall use. This late sowing will also give the best supply of young fruits for pickling purposes: the cool fall months are the best time to put them up for winter use. One ounce is sufficient for 100 hills, and 1 to 2 pounds are needed to plant one acre.

401 Early Fortune ☉

Early Fortune has been proclaimed the finest type of White Spine Cucumber ever introduced. It is an early disease-resistant variety and immensely productive. Fully grown fruits measure 9 inches long. The plants grow vigorously and the fruits are set very freely all along the vines. They are slightly tapering at both ends, with a well-rounded blossom and stem-end, measuring $2\frac{1}{2}$ inches across in the center of the fruits where they are thickest.

The color of the thin skin is rich dark green, which does not fade when the fruits are shipped to distant markets. The texture of the pure white flesh is firm and crisp. The flavor is most delicious. The seed cavity is very small. Our stock is unexcelled in every way. Pkt. 10¢; oz. 25¢; 4 ozs. 50¢; $\frac{1}{2}$ lb. 75¢; lb. \$1.25; 2 lbs. \$2.30; 5 lbs. \$5.50; 10 lbs. \$10.00, postpaid.

The fruits have well-rounded ends and they are thick throughout their entire length. A large productive variety which is very popular with market growers and extensively planted by home gardeners. Pkt. 10¢; oz. 20¢; 4 ozs. 40¢; $\frac{1}{2}$ lb. 60¢; lb. 95¢; 2 lbs. \$1.70; 5 lbs. \$4.05; 10 lbs. \$7.10, postpaid.

379 Burpee's Extra Early White Spine ☉

This excellent strain of white spine cucumber is planted most extensively by many gardeners, both for home use and for market sales. The fruits are perfectly cylindric in shape. They are slightly pointed at the ends and of most handsome appearance. The color of the skin is dark green and the surface shows hardly any ridges, as many Cucumbers do. A strong grower and free bearer. Unequaled as a table variety for slicing or for pickling purposes. Because the fruits are uniform and of good appearance, they usually bring an extra good price when offered for sale. Pkt. 10¢; oz. 25¢; 4 ozs. 60¢; $\frac{1}{2}$ lb. 85¢; lb. \$1.50; 2 lbs. \$2.75; 5 lbs. \$6.60; 10 lbs. \$12.00, postpaid.

"Perfect shape, perfect color, perfect shipper, early, productive, it stays green. 'Kirby' is the earliest of the White Spine type; fruit 7 to 8 inches long, cylindrical in shape. Color a beautiful dark green from stem to blossom end, which is retained longer than any other variety we know of. Green Bush Beans

String Beans are a most important crop with both the market grower and the home gardener. Freshly picked, they are most luscious, wholesome, and nutritious.

Beans belong to the tender class of vegetables, and the seed cannot be sown until the weather is quite warm—about the time the maples are well out in leaf. In the vicinity of Philadelphia early May is about the right time for the first sowing of bush beans. A warm, well-drained sandy loam is best suited. The beans are most delicious and should be picked before the pods have reached their full size. To provide for a continuous supply they should be sown every 10 to 14 days up to August 10th. Where the summers are hot and dry, sow up to the end of May and again from July 15th to August 10th. Plant the seed in rows not less than 18 inches apart, cover with 2 inches of fine dirt, and firm the soil to assist germination. One pound of seed sown thinly fills a row 250 feet long; 90 pounds of seed are usually sown per acre.

14 Extra-Early Red Valentine

Bush Lima Beans

Lima Beans are a tender vegetable and the seed must not be planted until the nights have become quite warm—about the time the oak trees are in leaf. The middle of May is usually safe in the vicinity of Philadelphia. Stick the seed edge-wise 5 inches apart in the row. One pound will sow 150 feet of row.

63 Burpee Improved Bush Lima

The pods are truly enormous in size, borne abundantly, and well filled with handsome beans which are both larger and thicker than those of the popular Burpee's Bush Lima—and fully 8 days earlier!

It differs from Burpee's Bush Lima in having much larger pods, producing more beans, and being considerably thicker. The growth is vigorous, with heavy foliage. Full-grown bushes measure 30 inches in height and 24 inches across the top. The pods are borne frequently in what might be called "clusters" of from 5 to 8. They measure 5 to 6 inches long by 1 1/4 inches wide, and the full size beans are of luscious flavor. They mature in 85 to 95 days from the date of sowing, but should not be planted before the soil has warmed up and the weather is quite settled. Pkt. 10¢; 1/2 lb. 25¢; lb. 45¢; 2 lbs. 80¢; 5 lbs. \$1.80; 10 lbs. \$3.35, postpaid. By express, 15 lbs. \$4.05; 25 lbs. \$6.50; 50 lbs. \$12.50; 100 lbs. \$24.00; 500 lbs. \$105.00.

60 Burpee's Bush Lima

This is the original dwarf large-seeded Bush Lima, as first introduced exclusively by Burpee in 1890. The bushes grow 18 to 24 inches tall. They are of stout growth and always erect, yet branching so vigorously that each plant develops into a rounded bush from 2 to 3 feet in diameter. **It is an immense yielder.** The pods and beans, however, are not so large, nor are the bushes so prolific as those of the Burpee Improved Bush. Pkt. 10¢; 1/2 lb. 25¢; lb. 45¢; 2 lbs. 80¢; 5 lbs. \$1.80; 10 lbs. \$3.35, postpaid. By express, 15 lbs. \$3.45; 25 lbs. \$5.50; 50 lbs. \$10.50; 100 lbs. \$20.00.

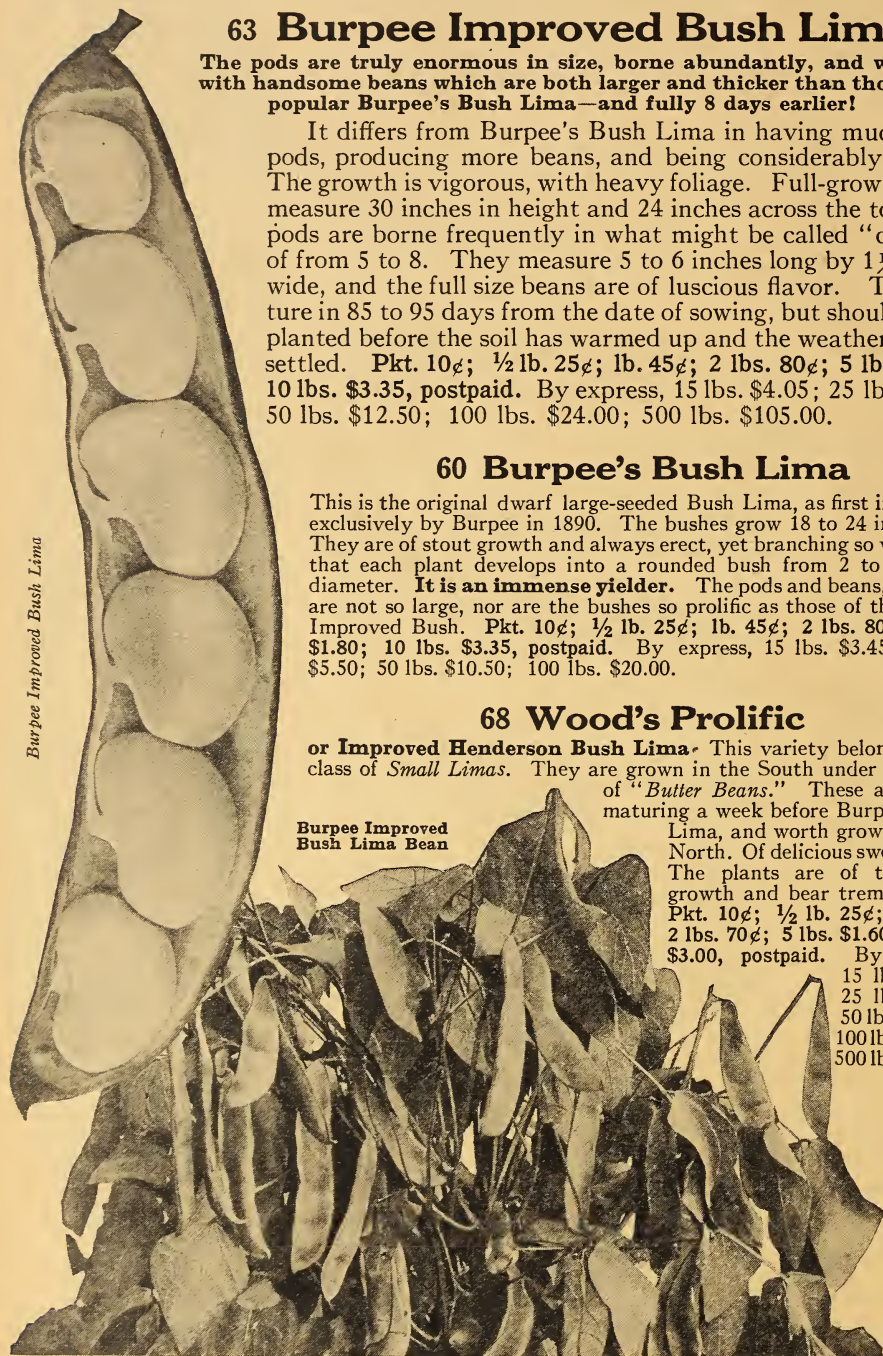

68 Wood's Prolific

or Improved Henderson Bush Lima. This variety belongs to the class of *Small Limas*. They are grown in the South under the name of "*Butter Beans*." These are hardy, maturing a week before Burpee's Bush

Lima, and worth growing in the North. Of delicious sweet flavor. The plants are of true bush growth and bear tremendously. Pkt. 10¢; 1/2 lb. 25¢; lb. 40¢; 2 lbs. 70¢; 5 lbs. \$1.60; 10 lbs. \$3.00, postpaid. By express, 15 lbs. \$3.30; 25 lbs. \$5.25; 50 lbs. \$10.00; 100 lbs. \$19.00; 500 lbs. \$85.00.

Burpee Improved Bush Lima

65 Burpee's Fordhook Bush Lima

Introduced by Burpee—The Most Popular of all Bush Lima Beans

We highly recommend this excellent Burpee introduction to all who prefer Lima Beans of the so-called Potato type. Fordhook Bush is altogether distinct. The plants grow 20 to 30 inches tall and make a spread of from 20 to 24 inches. The strong upright bushes withstand both whipping rains and high winds to a remarkable degree.

The dark green foliage is very substantial and the pods are borne in what may be termed as "**clusters**" which contain from four to eight pods. The individual pods measure 4 to 5½ inches long by 1½ x 1¼ inches wide. Quite often they are as much as ¾ of an inch thick. The individual beans are crowded together in the pods. There are 4 or 5 of these large beans in a single pod. The flavor of the beans is **sweet and delicious**. Because of its extra-early maturity, Fordhook will bear profusely even where the summers are comparatively short.

Burpee's Fordhook Bush Lima is an excellent cropper. We have counted bushes which had developed as many as fifty-two pods on a plant. Comparatively few pods are needed to fill a quart measure with shelled beans. This is due to their thickness and the crowded condition of the beans in each pod. The flavor of Fordhook is outstanding—a delicious taste not unlike chestnuts. Pkt. 15¢; ½ lb. 35¢; lb. 50¢; 2 lbs. 90¢; 5 lbs. \$2.00; 10 lbs. \$3.75; postpaid. By express, 15 lbs. \$4.95; 25 lbs. \$8.00; 50 lbs. \$15.50; 100 lbs. \$30.00; 500 lbs. \$135.00.

Fordhook Bush Lima

66 Burpee's New Philadelphia Bush Lima

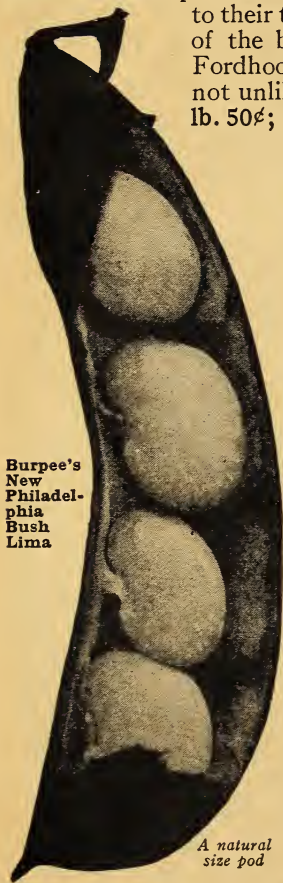

The Earliest Maturing of all Lima Beans

Burpee's Philadelphia Bush Lima Bean is a most **meritorious variety**, first introduced exclusively by Burpee in 1925. It is the result of a cross between Burpee's Fordhook Bush Lima and Wood's Prolific, and embodies the good qualities of both parents. In season of maturity it is **decidedly earlier** than either of the parent varieties. The pods are ready for picking seven days ahead of Wood's Prolific and are of considerably larger size.

Our New Philadelphia Bush Lima produces pods which are comparatively **large**, flat, and nearly straight. The average pods measure 4¾ inches in length and 1½ inches in width, containing four fair-sized flat beans of **excellent quality**. In color and general appearance the foliage is similar to Wood's Prolific, but slightly larger. The plants are of upright habit, **producing pods in the greatest abundance** well to the tip of the flower-spikes, which rise clear above the foliage. The earlier pods, however, are set quite close to the ground and are borne in **clusters of six to eight**. Southern planters will find that it far surpasses the bush Sieva or "Butter Bean," as it matures its pods considerably earlier and bears a much heavier crop.

Burpee's Philadelphia Bush Lima is hardy and requires a comparatively short season, which is of the greatest importance to our northern customers who require a very early variety. Burpee's Peas

The food value of Peas is exceedingly high, and the flavor, especially in the newer and improved varieties, is beyond comparison. To provide a continuous supply, the hardier round-seeded varieties are sown in spring as soon as the ground is fit. For later sowings the wrinkled-seeded kinds are preferred on account of their superior flavor, but they are less hardy. **Succession sowings should be made at intervals of 10 to 14 days during the cool weather.** One pound of seed will sow 120 feet of single row. In drills 100 to 150 pounds are required per acre.

From Kansas: "Burpee's Seeds bring good results"

Burpee's *Branching* Sweet Corn

New for 1928

322

BURPEE'S BRANCHING is a sensational new Sweet Corn, carrying four, five, and even six ears on a single plant. A careful check of our seed plots has proven that under field culture the average is over three ears per plant—that is, twice the yield of any other variety.

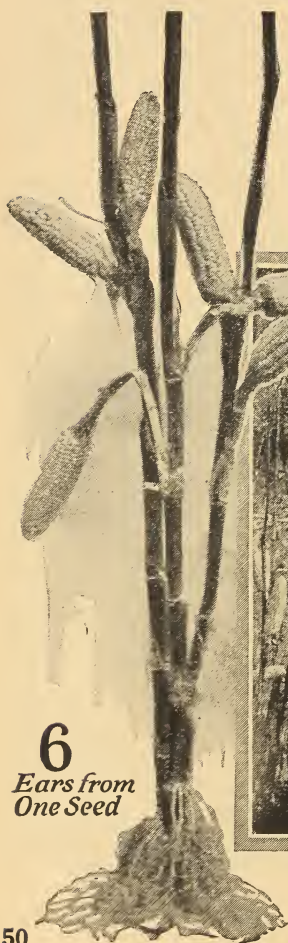

Burpee's Branching Sweet Corn originated with Mr. T. C. Kevitt of Athenia, New Jersey. It was only logical for Mr. Kevitt to have Burpee acquire this variety and make it available to gardeners everywhere. After growing this Corn on our own farms for two years we are more than ever convinced of its outstanding value.

Sweet and Tasty

Handsome ears, 7 inches long and $1\frac{3}{4}$ inches thick, carry pearly white kernels neatly arranged in 10 or 12 rows. Covered by a thin skin is a generous quantity of rich tasty pulp—as sweet and luscious as only real good Sweet Corn can be.

Burpee's Branching Sweet Corn is worth growing for its lusciousness alone, yet its free-branching habit insures double the yield of any other variety. While still quite young, the plants develop strong branches close to the ground as well as farther up the stalk—even the ears are carried on short branches, which makes pulling much easier and avoids injury to the main-stalks. Ready for the table in 90 days.

Pkt. 50¢; $\frac{1}{2}$ lb. \$1.25; 1b. \$2.25.

The two rows of Burpee's Branching Sweet Corn have been stripped of husk and foliage to show the ears. Note the even height of the plants, $6\frac{1}{2}$ feet tall, the uniform position of the ears, and the enormous yield.

316 Burpee's Delicious ☉

A most delicious and tasty new Sweet Corn of a richness and buttery flavor which heretofore have never been found in any white Sweet Corn. Burpee's Delicious is a chance sport from the famous Burpee Golden Bantam, and that may explain the similarity in quality. It originated with our good friend Dr. Herbert Hoffman, of Merchantville, N. J., who discovered it in his patch of Golden Bantam some years ago.

Burpee's Delicious makes a strong and vigorous growth, 5 to 7 feet tall. Under fair culture each stalk carries two fine ears measuring close to 8 inches in length. The kernels are broad and deep. They are pearly white with a fine thin skin enclosing a rich delicious pulp. Pkt. 15¢; ½ lb. 35¢; 1 lb. 50¢; 2 lbs. 90¢; 5 lbs. \$2.00; 10 lbs. \$3.75, postpaid. 325 Burpee's Sunnybrook ☉

This originated from the same plant as Burpee's Delicious, and consequently it resembles it in many ways. However, the ears are a trifle smaller and the kernels are even broader. It also matures a few days earlier. The bright golden yellow kernels are lusciously sweet, of buttery flavor, and covered with a thin skin. 305 Burpee's Early Fordhook ☉

306 "The Burpee" Sweet Corn ☉

This is our last year's introduction, and a careful check-up on the claims made for this variety have rather increased our enthusiasm for it. Many of our customers were kind enough to write us how much they liked "The Burpee" Sweet Corn and we feel convinced that there were many more who were thoroughly impressed with its good qualities.

"The Burpee" is an early variety, maturing 7 to 10 days ahead of Golden Bantam. The ears are about 7 inches long and therefore quite a bit larger than Golden Bantam. The plants grow from 5 to 5½ feet tall and produce, on the average, 2 ears each. "The Burpee" has a flavor much like Golden Bantam—exceedingly sweet, buttery, and luscious. Scientists tell us that the yellow varieties of Sweet Corn contain a considerable quantity of the health-giving substances called vitamins. Burpee's Beets

Beets are of universal culture. It is advisable to make repeated sowings in order that a constant supply of tender young roots may be had throughout the season. Seed may be sown as **early in the spring** as the ground can be worked into good condition. **Sowings should be made for succession at least once a month up to the end of July.** We recommend making a large sowing early in July to produce a supply of full-grown roots for winter use. If the roots are gathered with the approach of cold weather and kept in a cool cellar packed in slightly moist earth, they remain in perfect condition throughout the winter until spring.

The seed should be sown thinly in drills from $\frac{1}{2}$ to 1 inch in depth, leaving 12 inches or more between the rows to admit cultivation. When well started, thin the plants to stand 3 to 4 inches apart in the row. One ounce will sow 100 feet of drill; 4 to 6 pounds are needed per acre in drills.

Burpee's Black Red Ball

121 Burpee's Black Red Ball

Burpee's Black Red Ball is remarkable for its uniform shape, deep-colored flesh, and fine sweet flavor. The globe-shaped roots are smooth and free from any woody fiber. Both skin and flesh are of an unusually **deep rich red**, this intensity of color being retained when cooked, making the beets most attractive for both canning and pickling. Although very early (quickly reaching a diameter of 2 inches), if left growing, the larger roots retain their fine flavor and deep coloring. Fully grown roots measure 3 inches across. Excellent for the home garden, and one of the best varieties for market on account of its earliness. Pkt. 10¢; oz. 25¢; 4 ozs. 60¢; $\frac{1}{2}$ lb. 85¢; lb. \$1.50; 2 lbs. \$2.75; 5 lbs. \$6.60; 10 lbs. \$12.00, postpaid.

The flesh of the Beets is **deep blood-red**, with slightly lighter zonings. The texture is crisp and free from fiber. Pkt. 10¢; oz. 20¢; 4 ozs. 45¢; $\frac{1}{2}$ lb. 65¢; lb. \$1.10; 2 lbs. \$2.00; 5 lbs. \$4.80; 10 lbs. \$8.80, postpaid.

RUTABAGAS

Winter Turnips

Rutabagas are also called Swedes, Swedish Turnips, or Russian Turnips. They are more solid, of firmer flesh, and therefore keep later into spring than Turnips. They require about 4 weeks longer in which to mature than common Turnips, and at this latitude, Philadelphia, seed should be sown from the first to the middle of July to make large roots for winter keeping. One ounce for 400 feet of drill; 1 to 2 pounds per acre in drills, 4 to 5 pounds per acre broadcast.

Table Turnips

Turnips develop best during cool weather, and in the vicinity of Philadelphia a fine crop can be grown from seed sown early in the spring. But Turnips are most important as a fall crop. **For fall or winter use sow the seed between the middle of July and August 20** in rows not less than 18 inches apart, and cover with $\frac{1}{2}$ to $\frac{3}{4}$ inch of fine soil. The most popular method, however, is to broadcast the seed either between the rows of corn or in the cultivated orchard. The early white varieties are often sown as a catch crop after early Potatoes. One ounce will sow 400 feet of drill. In drills, 1 to 2 pounds per acre, sown broadcast, 4 to 5 pounds of seed are needed per acre.

Burpee's Carrots

Sow the seed thinly in shallow drills **early in the spring** and make succession sowings every 2 weeks up to the early part of July. When the plants are well started, thin out the small early sorts to 2 inches apart in the row, and large late varieties from 3 to 4 inches. They should be sown in rich mellow soil, deeply worked, and receive constant cultivation during growth to insure smooth, straight roots. **For winter storing sow a long row about the middle of June** which will make full size roots before cold weather sets in. BURPEE'S RADISHES

There are three distinct classes of radishes—Spring Radishes, Summer Radishes, and Winter Radishes. Every complete garden should include some of each class.

The Spring Radishes can be grown almost all the year around, and are important as a forcing crop during winter. They mature in the open in from 25 to 40 days, depending on the variety and the weather. They develop best during the cool season. Light sandy soil, rich in organic matter, is essential to produce crisp and tender radishes. **Plant as early in the spring as possible, and make succession plantings every 10 days.** Where the summers are hot, sow until the middle of May, then stop, but make three more sowings during August. Sow the seed thinly in shallow drills and cover with about one-quarter inch of fine soil. One ounce is sufficient for 100 feet of drill; 8 to 10 pounds of seed are needed to sow one acre planted in drills.

Burpee's ONIONS

Onions rank as one of the foremost vegetables in American gardens. They are highly praised for their tonic qualities, and doctors everywhere are advocating the use of them in the diet because they are wholesome and nutritious.

A good well-drained soil, reasonably fertile and well pulverized, will give the best crops. Cover the seed lightly and thin the seedlings when they are 3 to 4 inches tall so that they will have room to develop freely. When the bulbs have reached maturity, bend down the tops to hasten ripening before the onions are harvested. One ounce of seed for 200 feet of drill; 4 to 5 pounds per acre.

Two of AMERICA'S GREATEST Contributors to Nature Study and Horticulture

W. Atlee Burpee introduced into America more new Vegetables and Flowers that are now in general cultivation than any other man within the last half century.

Soon after starting into business he realized the need for better and more productive Vegetables and Flowers. During extensive travels throughout this country and abroad he came in contact with many thousands of local strains and new varieties which he carefully tested for superior merits before any of them were offered in Burpee's Annual.

Much of his time was devoted to the development and improvement of the Sweet Pea—the flower he made so popular throughout America that in the minds of flower lovers the name BURPEE has become inseparably associated with Sweet Peas.

W. ATLEE BURPEE

JOHN BURROUGHS

John Burroughs, the most famous American Naturalist, was an ardent believer in Burpee's Seeds.

The photo to the left shows Mr. Burroughs lifting a squash growing in his garden. He was so proud of this squash grown from Burpee's Seeds that he sent it on to his friend, Henry Ford, and wrote him that he had raised squashes aggregating 115 pounds in weight from a hill of four plants.

Mr. Burroughs was an old customer of ours and often wrote us how well pleased he was with the splendid results produced by Burpee's Seeds.

Burpee's Lawn Grass

The Fordhook Lawns, produced from the same Blend as the "Fordhook Finest" offered below

6145 Burpee's Fordhook Finest Lawn Grass

The lawn being a permanent feature deserves most careful consideration and we recommend Burpee's Fordhook Finest Lawn Grass, which we believe is unexcelled in every way. We know from our careful tests that it will produce a green, smooth, velvety sod with a thick bottom—altogether free from common grasses which are inclined to produce clumps or knots.

Fordhook Finest is unsurpassed for first class and permanent results. This is due to the fact that we use only the very finest varieties of the most suitable grasses for making an even, thick mat of grass. The various grasses which compose this well-balanced blend are fine-bladed and deep rooting, sure to produce the best results under the varied conditions of soil and climate met with in America. It is all plump, heavy seed, free from chaff or weed seeds, weighing 25 to 27 pounds per measured bushel. A small quantity of White Clover is included in order to help thicken the bottom of the sod. We recommend to sow Fordhook Finest, using 1 lb. of seed for a plot of 10 x 20 feet square, or 200 square feet. 150 to 200 lbs. of seed are required to sow one acre. **Lb. 60c; 2 lbs. \$1.10; 5 lbs. \$2.50; 10 lbs. \$4.75, postpaid.** By express or freight, the purchaser paying the transportation charges: 25 lbs. \$9.75; 50 lbs. \$18.50; 100 lbs. \$35.00; 250 lbs. \$85.00; 500 lbs. \$165.00.

Start your lawn right! The preparation of the soil, sowing, and care of the lawn are fully discussed in the Burpee leaflet, "How to Establish a Lawn." Ask for a free copy of this leaflet when you order your seed.

Lawn Grass—continued

Sow 100 to 150 lbs. per acre. **Lb. 60c; 2 lbs. \$1.10; 5 lbs. \$2.50; 10 lbs. \$4.75, postpaid.** By express or freight, 25 lbs. \$8.75; 50 lbs. \$17.00; 100 lbs. \$33.00; 250 lbs. \$81.00; 500 lbs. \$155.00.

Walker, of Skagway, Alaska, sent us the interesting picture to the right, together with the following message: "Two little Eskimo ladies, and Mrs. Dr. Griest from Point Barrow, Alaska—the most northern point of land on the American Continent—among the Burpee's Sweet Peas at Walker's. This being the first time the little ladies have seen flowers during their whole lifetime. The one at the left was the cook for Captain Roald Amundsen the last winter he spent at that northern land."

2513 Burpee Blend of Giant Fancy Pansies

For the lover of fine Pansies, this blend cannot be surpassed. It contains the largest and **most beautiful** of all blotched Pansies that have been developed after many years of careful and close selection. The Burpee Blend contains only well-formed, expanded flowers of uniform **large size** with an unusual range of colors and markings. The texture of the blooms is heavy and thick, so that the blooms are **well waved** and crinkled on the edges. The large flowers are borne upon long stiff stems which make them admirably suited for cutting.

Pkt. 25c; $\frac{1}{16}$ oz. 80c; $\frac{1}{8}$ oz. \$1.35; $\frac{1}{4}$ oz. \$2.30; $\frac{1}{2}$ oz. \$3.95.

2463 Giant Ruffled Masterpiece

The truly giant-sized flowers are of most striking character. The petals have so much substance that they are heavily ruffled, giving them the effect of a double flower. The colors are mainly rich dark shades, bordered, blotched, or marked in ray-like veinings with contrasting colors. It blooms freely and continuously as long as the weather remains cool. Pkt. 15c; $\frac{1}{16}$ oz. 35c; $\frac{1}{8}$ oz. 55c; $\frac{1}{4}$ oz. 95c.

2500 Mastodon Pansies

Immense and well-shaped flowers with thick and well-waved petals. This extra fine strain includes everything from pure white to deep mahogany. The very fine lavender, rose, cerise, and light blue shades deserve special mention. This mixture is particularly fine for the greenhouses or for frames, but it will do just as well out in the open. The blooms are borne most profusely during the entire season. Pkt. 25c; $\frac{1}{16}$ oz. 70c; $\frac{1}{8}$ oz. \$1.15; $\frac{1}{4}$ oz. \$1.95.

2460 Cassier's Giant This strain of Pansies has enjoyed great popularity for many years. It represents a careful selection of large flowers borne on long stems. The plants are compact and sturdy. The three lower flower petals or sometimes all five have each a dark, well-defined blotch. Contains a wide range of colors. Pkt. 20c; $\frac{1}{16}$ oz. 50c; $\frac{1}{8}$ oz. 85c; $\frac{1}{4}$ oz. \$1.45.

2453 Auricula-Flowered Those who appreciate the color values and tones found in Auricula Primroses will be attracted by this large-flowered strain of Pansies. The blooms are well rounded and of good proportions. The colors vary considerably but have been selected to represent the particular shades as found in Auricula Primroses. Pkt. 10c; $\frac{1}{16}$ oz. 35c; $\frac{1}{8}$ oz. 55c; $\frac{1}{4}$ oz. 95c.

2459 Paris Improved Blotched This is a valuable, large-flowered strain of Pansies which has been selected with the utmost care to restrict it to only large-size, well-formed blooms of many shades, with every petal being marked with a well-defined large dark blotch. Pkt. 15c; $\frac{1}{16}$ oz. 40c; $\frac{1}{8}$ oz. 65c; $\frac{1}{4}$ oz. \$1.10.

2455 Striped Mixed This variety produces a large number of medium-size blooms which are attractively striped in many shades. 2417 Orchid-Flowered

This distinct and beautiful strain of Pansies will appeal to those who prefer delicate tints and soft shades of color. The flowers are all of fine form and good size. They bloom freely from spring until late in the fall. The unique colorings include shades of chamois, terra-cotta, pink, lilac, rose, and orange. The name "Orchid-Flowered" has been given to this because these delicate shades, together with the finely ruffled edges, are not unlike Orchids. Pkt. 20c; $\frac{1}{16}$ oz. 50c; $\frac{1}{8}$ oz. 85c; $\frac{1}{4}$ oz. \$1.45.

2461 Bugnot

The Bugnot type of Pansies is most attractive. It differs from the Cassier's type in that the blotches on the petals are not well defined but radiate into the margin of the flowers. This characteristic adds to its attractiveness besides increasing the apparent size of the bloom. Bugnot Pansies are unique and beautiful. Our strain has been selected for free-blooming habit and compact growth, characteristics which both are most desirable in Pansies. The color range has received our greatest attention in order to provide as many shades as possible. Pkt. 15¢; 1/16 oz. 40¢; 1/8 oz. 65¢; 1/4 oz. \$1.10.

Illustrated in Color on the Back Cover

3500 Adorable

A delightful shade of clear salmon-cerise on cream ground. A suspicion of bronze around the edge of the standard and a suffusion of bronze on the reverse add a glistening sheen to a bunch of Adorable. The many four-flowered sprays are borne on long stems in the greatest profusion.

The color of Adorable will make it tremendously popular. Attractive by day, Adorable becomes fascinating under lamp light. Pkt. 25¢; ½ oz. \$1.25; oz. \$2.25; 4 ozs. \$7.50; ½ lb. \$13.75; lb. \$25.00.

The lemon keel and lemon blotch at the base of the standard gives the finishing touch to a flower of wonderful beauty. When bunched, the color effect is a bright eosine-pink with a rose suffusion.

Happiness is vigorous. It produces big flowers in fours on long stems. For exhibition or cutting, Happiness will be in much demand. Pkt. 25¢; ½ oz. \$1.25; oz. \$2.25; 4 ozs. \$7.50; ½ lb. \$13.75; lb. \$25.00.

A clear and sparkling shade. Distinct from all others and more desirable than any in its color class. Brilliant Rose is of such pure and glistening color that other rose varieties appear dull by comparison. Strong and robust vines, carrying an abundance of four-flowered sprays. Pkt. 25¢; ½ oz. \$1.25; oz. \$2.25; 4 ozs. \$7.50; ½ lb. \$13.75; lb. \$25.00.

3413 FLUFFY RUFFLES

The New Giant Ruffled Sweet Pea

A great, big flower, vigorous and free-blooming—the first of the Ruffled Sweet Peas. A new type, duplexed and frilled with long-stemmed, well-proportioned sprays of four almost globular flowers. No other Sweet Pea exhibits such a consistent doubling and ruffling of its petals. Twelve sprays make a more massive bunch than eighteen sprays of an ordinary Spencer Sweet Pea.

A lovely rich rose-pink, a gleam of soft salmon, and a bright creamy undertone blend into a harmonious cream-pink shade that must be seen to be appreciated. A flower of exquisite texture and fragrance. The vines make a sturdy growth and bear a profusion of blooms. Each flower stem carries four fully developed blooms, artistically arranged. Ideal for bunching.

The highest achievement yet attained in the most glorious of annuals is Fluffy Ruffles—the Ruffled Sweet Pea.

Burpee's Sweet Peas

The Early or Winter-Flowering Varieties

These splendid Sweet Peas were, with a few exceptions, all introduced by Burpee. They are valuable to florists for greenhouse culture and are also adaptable to outdoor planting in warmer climates, such as certain sections of our own southern states, Australia, and South Africa. They do well in many sections where the summer-flowering varieties cannot be grown successfully. In cooler climates they are of value because they bloom a week or ten days earlier.

Miss Philadelphia

Burpee's BALCONY PETUNIAS

The most valuable type of Petunias, equally useful for planting in porch boxes, beds, terraces or among rockwork. The Balcony Petunias may be depended upon to supply an unsurpassed floral effect throughout the summer and fall. The individual blooms measure 3 inches in diameter and they are borne so profusely as to cover the plants throughout the season.

2570 Balcony Mixed

An excellent mixture of the three splendid colors illustrated on this page. Where a continuous showy bed is wanted, this mixture will give an effect that cannot be surpassed. Pkt. 15¢; 1/16 oz. 60¢; 1/8 oz. \$1.00; 1/4 oz. \$1.70.

7825 Collection of Balcony Petunias

We will send one packet each of **Balcony Rose**, **Balcony Blue**, and **Balcony White** Petunias. Value 45¢, postpaid, for **35¢**

2557 Balcony Rose Really, this variety is hard to surpass for balcony planting or bedding. The wide-open, well-shaped blooms are a glistening shade of bright rose. A profuse and continuous bloomer of excellent strong growth. Looks its best when planted in masses. Pkt. 15¢; 1/16 oz. 65¢; 1/8 oz. \$1.10; 1/4 oz. \$1.90; 1/2 oz. \$3.25.

2553 Balcony Blue

The flower opens up as a purplish blue, turning to a rich violet-blue that must be seen to be appreciated. This was the first of the Balcony Petunias, and as soon as it was introduced became very popular throughout America and Europe. It is a free bloomer, with flowers of large, well-expanded form. Its excellent strong growth and free-flowering habit make it very desirable. Pkt. 15¢; 1/16 oz. 65¢; 1/8 oz. \$1.10; 1/4 oz. \$1.90.

2555 Balcony White

An excellent companion to the Blue and Rose Balcony Petunias described above. We consider it by far the best large-flowering white Petunia in existence. The blooms measure nearly 3 inches in diameter. They are pure white, with just a few light apple green veins in the throat. Blooms freely and continuously. Pkt. 15¢; 1/16 oz. 65¢; 1/8 oz. \$1.10; 1/4 oz. \$1.90.

BURPEE'S GIANT PETUNIAS

It is marvelous to see what expert plant breeders have done with the old-fashioned, small-flowered Petunia which was grown by our grandparents many years ago. These Giant Petunias are all of immense size and heavy texture. Some varieties have plain edges, others are fluted and waved. Again there are others which are fringed in a most artistic manner.

These large-flowered Giant Petunias require a trifle more care to grow than the ordinary type. The very small and expensive seed should be sown carefully indoors in boxes or pans, barely covering the seeds with fine soil.

2534 Apple Blossom A most beautiful tint of apple-blossom pink with fine delicate veins of a slightly deeper shade. Deep in the throat, these veins appear as a bright soft green. The blooms are large and much waved, with fine exquisite fringe at the edges. A good strong grower, blooming most profusely. Pkt. 25¢; $\frac{1}{128}$ oz. 85¢; $\frac{1}{64}$ oz. \$1.35; $\frac{1}{32}$ oz. \$2.10.

2528 Charm Charm is a beautiful variety with bright rose-pink flowers shading lighter toward the throat. The flowers are large and deeply lobed. They are beautifully waved and have an exquisite fringe. The lemon-yellow throat shows some light apple-green veins. This will appeal to those who show a preference toward the more delicate and dainty shades in flowers. Pkt. 25¢; $\frac{1}{128}$ oz. 85¢; $\frac{1}{64}$ oz. \$1.35; $\frac{1}{32}$ oz. \$2.10.

2539 Elk's Purple Immense flowers of rich deep Elk's Purple. The texture of the petals is substantial and of velvety appearance. They are most attractively waved, forming, with their large lobes, a fine five-fingered star. The velvety black veins add much to the beauty of the magnificent flowers. A strong grower and very profuse bloomer. Always greatly admired. Pkt. 35¢; $\frac{1}{128}$ oz. \$1.00; $\frac{1}{64}$ oz. \$1.60.

2542 Fancy The immense flowers are of most artistic form. They are well expanded and have a finely frilled or ruffled edge. The color of the blooms is soft lilac shaded with deeper lilac, heavily veined with deep carmine-purple. The fine artistic network of these veins greatly enhances the beauty of the flower. Pkt. 25¢; $\frac{1}{128}$ oz. 85¢; $\frac{1}{64}$ oz. \$1.35; $\frac{1}{32}$ oz. \$2.10.

2532 Giant Blue and White A lovely variety, with large, well-waved flowers. The blooms are strikingly marked with irregular blotches of deep blue on a pure white ground. No two flowers, even on the same plant, are marked alike. Some of them show decidedly more blue than white, others again show comparatively few blotches of blue. Pkt. 35¢; $\frac{1}{128}$ oz. \$1.00; $\frac{1}{64}$ oz. \$1.60.

2535 Lilac Beauty The texture of the petals is heavy and in keeping with their large size. The color is a charming soft lilac-blue which shades into a fine violet-blue near the margin. The beauty of this variety is greatly enhanced by a network of deep violet-blue veins emerging out of the throat. Pkt. 35¢; $\frac{1}{128}$ oz. \$1.00; $\frac{1}{64}$ oz. \$1.60; $\frac{1}{32}$ oz. \$2.45.

2567 Burpee's Defiance

We have been growing this strain of Defiance Petunias for many years on the Burpee Farms in Pennsylvania and California. Every year we have selected the largest and most beautifully marked plants for stock seed. This selection, which has been going on for over twenty years, has given us a strain of Giant Petunias which we believe to be unequalled. We know of no other mixed type of Giant Petunias which produces as large flowers and includes as wide a range of beautiful colors.

The shades found in Burpee's Defiance Petunia are indescribably rich and varied. Many of the flowers are self-colors, others again shade to white in the throat. The attractively mottled, striped, blotched, and veined flowers deserve particular mention. Pkt. 25¢; $\frac{1}{128}$ oz. 85¢; $\frac{1}{64}$ oz. \$1.35; $\frac{1}{32}$ oz. \$2.10; $\frac{1}{16}$ oz. \$3.60.

2529 Pink Glory Most exquisite luminous pink flowers with a contrasting white throat, finely marked with creamy white veins in the lower part. A striking color and a flower of excellent large size. The texture of the petals is substantial and the large blooms are well waved. Of vigorous growth and free blooming. Excellent for beds, borders, or window-boxes. Pkt. 25¢; $\frac{1}{128}$ oz. 85¢; $\frac{1}{64}$ oz. \$1.35; $\frac{1}{32}$ oz. \$2.10.

2536 Portland Beauty Portland Beauty is a most beautiful flower. The blooms are deeply lobed and much waved, being finely and irregularly fringed on the edges. A deep tyrian-rose shaded with carmine and heavily veined with purplish black. It is a strong grower and blooms freely. Pkt. 25¢; $\frac{1}{128}$ oz. 85¢; $\frac{1}{64}$ oz. \$1.35; $\frac{1}{32}$ oz. \$2.10.

2541 Scarlet Beauty Brilliant velvety scarlet shading to a glorious rose with a pattern of deep purplish crimson veins. The lace-like fringe of the edges gives it great charm. Pkt. 25¢; $\frac{1}{128}$ oz. 85¢; $\frac{1}{64}$ oz. \$1.35; $\frac{1}{32}$ oz. \$2.10.

2537 White Beauty Pure white blooms attractively veined in the throat with light apple-green. Deep in the throat there are a few copper-carmine markings. A beautiful flower. Pkt. 25¢; $\frac{1}{128}$ oz. 85¢; $\frac{1}{64}$ oz. \$1.35; $\frac{1}{32}$ oz. \$2.10.

2530 White Ruffled Monster

The edges of the petals are artistically waved and fringed. A few light green veins appearing in the throat add greatly to the charming effect of this flower. Of mammoth size; free blooming from midsummer until frost. Pkt. 25¢; $\frac{1}{128}$ oz. 85¢; $\frac{1}{64}$ oz. \$1.35; $\frac{1}{32}$ oz. \$2.10.

2569 Giant Fluffy Ruffles

Large, well-waved, and beautifully fringed. Includes a wide range of bright and showy colors—pink, scarlet, crimson, lavender, and purple; many in self colors, others beautifully marbled and blotched in a showy manner. Pkt. 35¢; $\frac{1}{128}$ oz. 85¢; $\frac{1}{64}$ oz. \$1.35; $\frac{1}{32}$ oz. \$2.10.

Burpee's Phlox

Phlox is one of the easiest grown and most satisfactory of all summer-flowering annuals. The brilliant colors always make a good impression. The plants grow 15 inches tall. Sow early in the spring.

They need an open location and plenty of moisture. Sow the seed when the trees are coming into leaf. When well started, the plants should be thinned out to stand 2 feet or more apart. New Giant Snapdragons

Antirrhinum maximum

To appreciate the wonderful beauty of these new Giant Snapdragons they must be seen. Words fail to adequately describe the glorious colors found in this class. They are a recent development and within a few years have become extremely popular. While this class would deserve growing for its beautiful colors alone, it outclasses all other Snapdragons in size of blooms and strong habit. Well-grown plants make magnificent tall spikes, each spike being closely set with large, well-formed flowers.

The individual blooms measure fully twice the size of the ordinary Snapdragons and the well-rounded and much branched plants are extremely free blooming.

The plants are a mass of blooms from June until August. Grown outdoors the Giant Snapdragons attain an average height of 2 to 3 feet, but grown in the greenhouse for winter blooming the spikes measure 3 to 4 feet in length.

1705 Apple Blossom A delicate apple-blossom-pink with a contrasting yellow lip. A magnificent variety with well-shaped flowers of immense size. Borne on long solid spikes. Pkt. 15¢; $\frac{1}{16}$ oz. 60¢; $\frac{1}{8}$ oz. \$1.00; $\frac{1}{4}$ oz. \$1.70.

The color of the individual blooms is bright shining carmine-rose with just a touch of golden yellow on the lip. It is always greatly admired. Pkt. 15¢; $\frac{1}{16}$ oz. 60¢; $\frac{1}{8}$ oz. \$1.00; $\frac{1}{4}$ oz. \$1.70.

Burpee's Snapdragons—Continued

The half-dwarf type of Snapdragon is without question most popular. It is well adapted for beds or borders and the flower-spikes are long enough for cutting. Snapdragons are superb during the cool early days of summer and during the late fall. Where the summers are moderately cool they can be depended upon to furnish a display from early June until frost. We have been growing Snapdragons on Burpee's Fordhook Farms for many years and know from comparative tests that our strain cannot be surpassed. The plants grow 15 inches tall.

They are easy to grow and bloom freely and continuously during summer and fall, requiring no special kind of soil or care. Any good garden soil, even that which is rather heavy, is suitable.

Sow the seed when the maples are coming into leaf and cover thinly with fine soil, pressing the surface of the bed firmly to bring the seed into close contact with the soil. Thin the plants from time to time to give them plenty of space to develop freely.

Strawflowers—Helichrysum

Strawflowers, or Helichrysum, are in great demand not only for the fine effect they give in beds and borders and as cut-flowers, but also because they can be dried for winter bouquets. The plants grow 16 to 21 inches tall and bloom from July until frost.

Strawflowers are easy to grow and do well under the most varied conditions of weather and soil met with in America. They do best if planted where they get sunlight all day long.

Flowering Bulbs and Roots

The bulbs and roots which we offer on the following pages have been grown with as much care as Burpee's Seeds. Most bulbs add a touch to the garden which cannot be created by any other flowers. Some of our most popular flowers are grown from bulbs. Just think of Dahlias, Gladiolus, and Lilies! Yet there are many other flowers grown from bulbs or roots which deserve to be planted just as widely. As a rule, it is easier to raise flowering plants from bulbs or roots than it is from seed. There are flowers grown from bulbs for almost every purpose. Many of them are excellent for garden displays; others are used extensively for pot-plants, and there are also a number of quick-growing climbers.

PEONIES

What looks prettier than a well-grown Peony plant covered with a mass of gigantic flowers? The Peony comes into bloom at that time of the year which makes it an extremely desirable flower for use in connection with our national holiday, Memorial Day. With ordinary care the plants will bear their massive, fully double flowers in great profusion from year to year. Plant the roots during the early spring in a bed well prepared and enriched with plenty of well-rotted manure. Cover the crowns with not more than 2 inches of good soil. The flowers, when cut, will last a long time in water. Most varieties as soon as they begin to open up are exquisitely scented and those offered below are the best in their color classes. Hardy Flowering Shrubs

Shrubs are a permanent feature, and it is worth your while to plant the best kind you can get. We deliver all shrubs purchased from us and guarantee their safe arrival. For best results, dig a good size hole for every shrub at the time you send in your order, mixing the bottom soil with the soil on the top. This will enable you to plant as soon as the Nursery Stock is received. Our stock is clean and healthy and has been properly inspected. You will receive extra select bushy two-year-old plants.

Nursery Stock must be shipped while dormant and we cannot guarantee to fill orders received after May 15th

Quality Farm Seeds

The farmer of today is fully aware that it pays him in dollars and cents to use seeds of known quality only. He knows that good seed is the first requirement for a good crop. Cheap seeds waste the time, labor, and fertilizer that have been used in preparation for the crop, and no after-care in cultivation can bring profitable returns.

Root Crops are one of the most important classes of all farm seeds, yet they are greatly neglected in many sections of this country. Their high food value makes them very desirable for stock-feeding all the year round. They are easily stored throughout the winter. **Mangel Wurzels and Sugar Beets** are listed on page 56; **Carrots for Stock Feeding**, on page 59; **Turnips and Rutabagas**, on pages 56 and 57.

GRASS SEED

Nothing is more important to the farmer than that the grass seed he sows be pure and clean. The seed should also be plump, heavy, and well ripened, so as to insure a good stand. First-class, thoroughly re-cleaned seed, even though considerably more costly in the beginning, is really much cheaper in the end than the light, chaffy grades generally sold at much lower prices, even if the latter is free from weed seeds.

Planting Calendar for Vegetables

See Planting Calendar for Flowers on next page

The wide-awake gardener begins sowing early in the spring, and sows succession crops throughout the summer, until late in the fall. Succession crops are most important, since they provide fresh vegetables for fall and winter use, and a cellar full of stored vegetables is a good investment.

The dates apply to the vicinity of Philadelphia and localities with similar weather conditions, where the first light fall frosts occur about the middle of October and severe frosts around the first of November. The outdoor sowing season begins late in March or early in April, depending on the condition of the ground. In cooler sections sow correspondingly later in the spring and make the midsummer and fall sowings correspondingly earlier.

Planting Calendar for Flowers

The best time to start a flower-bed is early in the spring, as most seeds germinate best during the moist spring weather. Early sowings also give earlier and longer seasons of bloom, and with just a little extra care any one can have a fine display in the flower garden from plantings made as late as June 1.

Plant During APRIL in the Garden

April is the biggest month for sowing outdoors. As soon as the danger of frost has passed and the ground has dried out sufficiently, spade your garden, and with a rake make the surface fine, smooth, and even. Sow thinly.

This is the best month for setting out all kinds of Hardy Perennial Roots, Shrubs, Hardy Vines, Fruit Trees, etc. Prepare your ground in advance by digging holes of good size, breaking up the subsoil and mixing it with topsoil and well-rotted manure, or decaying leaves. Fill the hole up with good soil, and when the nursery stock arrives it will take little time to open it up again and plant.

Plant During JUNE in the Garden

It is still time to make a garden during June and nearly all flowers listed for April and May planting will give good results if sown now. During the warm June weather seeds will germinate quickly. This month is ideal for sowing perennial seeds in a special seed-bed, so that the plants will be of good size for setting in the permanent place the latter part of August or September. You can still start your lawn during June providing you can water it regularly during the hot summer months.

Plant During Summer and Fall

A garden can still be started in July by choosing quick-growing Annuals, such as Sweet Alyssum, Ageratum, California Poppies, Larkspur, Petunias, Phlox, and others. Of course, care must be taken to water them while the weather remains dry.

August and September are good months to start perennials for next year's blooming. In many sections September is ideal for starting a lawn. The planting of Dutch Bulbs, such as Tulips, Hyacinths, Narcissus, and others, should be taken care of during late September and October. Write for a free copy of our Bulb Catalog, published in August.

Fall Sowing of Annuals

Few gardeners know or take advantage of the fact that quite a number of our best and most easily grown annuals can be sown outdoors late in the fall. These varieties usually make stronger plants and bloom earlier and more profusely than if sown in the spring. About the time the first light frosts are expected is right to sow outdoors in seed-beds or where the plants are to bloom.

Burpee's Seeds Grow

Fifty years ago, when W. ATLEE BURPEE, the founder of the Burpee business, told his friends of his decision to **Guarantee** the seeds he sold to **Grow**, they expressed great concern about the success of such an unusual step.

It was his firm belief in the honesty and fair judgment of those who till the soil that gave W. ATLEE BURPEE the courage to offer his seeds on a money back guarantee. This principle of the founder has become the cornerstone of the Burpee Business of today.

Burpee's GUARANTEE

We guarantee the vitality and purity of our seeds to the full amount of the purchase price. You can have your money back any time within the year if you are not satisfied with the results from Burpee's Seeds.

Even with Burpee Quality Seeds success in gardening or farming depends largely upon cultivation, soil, and weather conditions. It is therefore agreed that in no case shall W. ATLEE BURPEE Co. be liable for more than the amount actually paid for the seeds or bulbs.

We guarantee the safe arrival of your seeds, and we guarantee their quality to the full amount of the purchase price.
